

DEAR COLLEAGUE,

The unique format of the implant masterclass was inaugurated by the ADI over 20 years ago, and since then a succession of highly acclaimed speakers have travelled to the United Kingdom to deliver presentations of an exceptionally high quality. I am delighted to announce the latest in this series: the 2010 Masterclass with **Dr Ken Hebel** from Canada.

Dr Hebel presented at the ADI Team Congress in Birmingham in 2009 and received the best feedback of all the speakers at that meeting with his entertaining, interactive, educational and informative approach to the treatment planning and restoration of aesthetic, partially dentate patients.

The **Annual General Meeting** of the ADI will be held during the day and notice of this will be distributed to ADI members nearer the time according to our constitution.

As with all ADI events, the mixture of education and interaction with colleagues, together with a trade show, should make this day one not to be missed, so please book early, taking advantage of the advance booking fee.

I look forward to welcoming you on 12 November.

Stephen Jacobs
President

Dedicated to improving the standards of implant dentistry by encouraging continuing education and scientific research

KEN HEBEL B.Sc., D.D.S., M.Sc.

Dr Ken Hebel has been practising as a prosthodontic specialist for over 25 years, providing implant, aesthetic and reconstructive treatments. As one of the early pioneers to embrace Implant Dentistry, Dr Hebel provides both surgical and prosthetic phases of Implant Therapy to his patients. His wealth of knowledge and experience has made him one of the most sought after educators and leaders in the Implant Industry.

Dr Hebel is a Diplomate of the American Board of Oral Implantology/Implant Dentistry, a Diplomate of the ICOI and a Fellow of the AAID. He maintains a private practice and is the director of the Hands On Training Institute located in London, Ontario, where he provides hands-on surgical and prosthetic implants education.

MASTERCLASS CONTENT

Treatment-planning concepts for implant dentistry are often poorly understood and the restoration of dental implants is often too complicated and time consuming. The presentation will emphasise the use of standard prosthodontic principles to simplify the restoration of dental implants to create excellence. Dr Hebel will introduce the concept of biologic imperatives of healing to control aesthetics and accelerate treatment time lines.

An organised approach will be presented for the evaluation, diagnosis and treatment planning of restorative needs of dental implant patients. This approach can apply to patients who are having fixed reconstructions on natural teeth, including implant-supported restorations.

Concepts of smile design will be used to predict treatment outcomes and determine the need for bone and soft tissue grafting. The plane of occlusion which determines function and aesthetics will be used to control aesthetics and tooth reduction, and will indicate the need for crown lengthening.

Through the use of standardised, easy-to-follow techniques, case management will be demonstrated. It will enable practitioners to have a new and simplified view for reconstructing implant-supported prostheses and make more complex implant challenges a routine part of everyday practice.

Dr Hebel uses the latest techniques of computer-generated slides, animation and video to bring to life the core concepts of every day dental practice. His goal is to provide exciting, leading edge, useful information to stimulate higher quality and higher production for every participant.

APPLICATION FORM

MASTERCLASS AND AGM FRIDAY 12 NOVEMBER 2010

To apply now simply visit www.adi.org.uk/masterclass2010
Alternatively please fill out the form below.

Title: **Prof / Dr / Mr / Mrs / Ms / Miss** (circle as applicable)
